a weekly feature of the Kennebunk-Kennebunkport-Arundel Chamber of Commerce

Mousam River STEM Academy

How long in business?

2 years!

Primary business/service offered?

Mousam River STEM Academy is a private preschool and elementary school offering hands-on STEM education, experiential outdoor learning, and engaging vacation and summer camps.

What makes your business special?

We blend academics with real-world, hands-on experiences. Our students don't just learn about science, engineering, and history — they build, experiment, explore the outdoors, and connect with local professionals. We take learning beyond the classroom walls, going on at least 14 field trips each school year to immerse students in authentic, real-world experiences. Our small class sizes allow us to deeply personalize learning and foster confidence, curiosity, and independence.

Best thing you sell/serve/do?

We create joyful, meaningful learning experiences that make kids excited to come to school. Whether it's building structures, conducting experiments, hiking the property, visiting local businesses and organizations, or launching creative projects, we make learning come alive.

Something people don't realize about your business/services?

Many people don't realize that we serve both preschool & elementary students year-round and also offer themed STEM camps during school vacations and throughout the summer. We are not just a school — we're a hub for hands-on learning experiences for the broader community. We're located right across the Mousam River and share a border with Kennebunk, making us a short drive away. We love welcoming families from surrounding communities and would be thrilled to host your child(ren) in one of our programs.
